Highscores Page:

There is a Highscores page that lists the highscores for each user on each level. This page is linked to the database, and updates whenever a user posts a new score.

Shop:

The shop is tied to the database, and updates the user's credits on purchase of items such as nos tanks and different colored skins.

User Identity and Role:

A player is redirected to the login page upon entry and is required to create an account before they can play the game.

NOTE: Final commit on Github is just to include the Final Report in the repo.
